Digital Acceleration Experts

Hello,

We are Integralsoft Solutions
Nice to meet you!

About Us

Integralsoft Solutions was born from the need to offer a comprehensive technology service to companies or startups of any size.

Offering quality and transparency, allowing them to quantify and qualify their investments in web services, custom software, use of cloud tools, and design of technology solutions.

Although there are thousands of technology companies we see that there is still a gap in the balance of quality, cost, and compliance that we intend to fill with a new approach.

Our certified experience with professionals who have been in the industry for more than 20 years, allows us to see what future trends will look like and which ones will become relevant.

Giving us a clear picture to guide your startup or business' technological solution. That is why we want to introduce ourselves to you.

Our process

DESIGN

Our solution architects focus on your operational, technological, and strategic challenges. We then design a strategic roadmap to guide you through a results-driven digital transformation.

EXECUTION

We quickly assemble a dream engineering team to meet your unique needs and objectives. Using our deep technology expertise, the top 1% of technology talent and our industry-specific experience, we deliver the most optimal solutions for your challenges.

ACCELERATION

Accelerate your business with the support of our team. Your digital transformation will swiftly take off and evolve into digital acceleration. This process lays the foundation for a more efficient and robust business that is able to meet the needs of your customers.

Our culture

Our Workflow

- Curiosity and innovation are requirements.
- Listening is a way to start a conversation.
- We value planning and discipline.
- We do things ethically because it's the only way.
- We always deliver on time.
- We reward and celebrate success.
- Everyone in the company is an ambassador of our dedication to dedication to excellence.
- We foster a spirit of cooperation.

Our Mentality

- We love to be the first to say hello.
- We are helpful and friendly.
- We accept changes, we are flexible.
- We love to learn and share what we learn with others.
- We share a passion for exercise, respect for nature, and a healthy lifestyle.
- We know that some rules cannot be broken; the rest are negotiable.
- We are in constant communication.

Our values

Innovation

Passion

Dedication

Quality

Fulfillment

Our services

Software Design and Development

Software outsourcing occurs when companies choose to have a third party develop customized software solutions.

Outsourcing software has many advantages including reduced costs, improved efficiency, mitigated risk, and enhanced security.

Dedicated Agile Teams

Agile teams are motivated by a shared vision and commitment to deliver value to customers and stakeholders. Each team member is fully dedicated to their team and works diligently to support the team's goals.

Web-Based Applications

A web-based application is any program that is accessed through a network connection using HTTP, rather than existing within the memory of a device. Web-based applications often run within a web browser.

Mobile Applications/Devices

A mobile application, commonly referred to as an app, is a type of application software designed to run on a mobile device, such as a smartphone or tablet.

Desktop Applications

A desktop application is a software program that can be installed on a single computer (laptop or desktop) and is used to perform specific tasks.

Cloud Migration

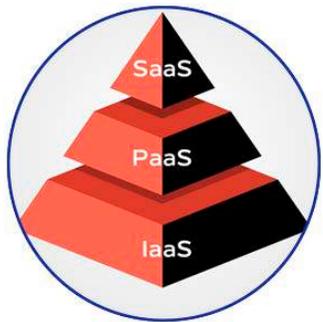

Cloud migration is the process of moving digital business operations to the cloud. Cloud migration is somewhat like a physical move, except that it involves moving data, applications, and IT processes from one data center to another, rather than packaging and moving physical assets.

Cloud Solutions

We embrace the power of change to create 360° value by putting the cloud at the center of your business. Our approach prioritizes your business' needs, creating industry-specific solutions for you to migrate to and benefit from the cloud as soon as possible.

Discover new and better ways to unlock the power of cloud computing. From migration to cloud management, we'll work with you to help your business deliver on its promise and achieve value at every step of the process.

SAAS/PAAS/IAAS

(SaaS), is the most complete form of cloud computing services and offers a complete application managed by a provider through a web browser.

(PaaS), is where a provider hosts the hardware and software on its own infrastructure and delivers this platform to the user as an integrated solution.

(IaaS), is a step beyond the local infrastructure. It is a pay-per-use service in which a third party provides you with infrastructure services, such as storage and visualization.

Microservices

Microservices architecture (often abbreviated as microservices) refers to an architectural style for developing applications. Microservices allow you to separate a large application into smaller independent parts, each of which has its own scope of responsibility.

What Solutions do we Offer?

Quality Control Solutions

Our team of professionals handles a diverse range of services and provides strategic solutions to make your business safe by improving your quality control infrastructure.

Test Driven Development

Test-driven development (TDD) is a software development process that relies on software requirements being converted into test cases before the software is fully developed. All stages of software development are tracked by repeatedly testing the software throughout all test cases.

Manual Testing

Manual testing is a software testing process in which test cases are executed manually without the use of any automated tools. All test cases are executed manually by the tester from the end user's perspective. It ensures the application is functioning as it should according to the requirement document.

Automated testing

The time to automate your tests is when:

- There are repetitive processes.
- There are extensive flows that require updates and need to be regression tested.
- There are complex cases that are time consuming.
- It is necessary to run multiple tests.
- It is essential to minimize human error.

CI-CD / DevOps

CI/CD allows organizations to ship software quickly and efficiently. CI/CD facilitates an effective process for bringing products to market faster than ever before, continuously delivering code into production and ensuring a continuous flow of new features and bug fixes through the most efficient delivery method.

DevOps is the combination of philosophies, practices, and cultural tools that increase an organization's ability to deliver applications and services lightning-quick: they evolve and upgrade products at a faster rate than organizations that use traditional infrastructure management and software development processes.

**We are looking forward
to working together on
your projects.**
